

THE ELITE MAG BAG

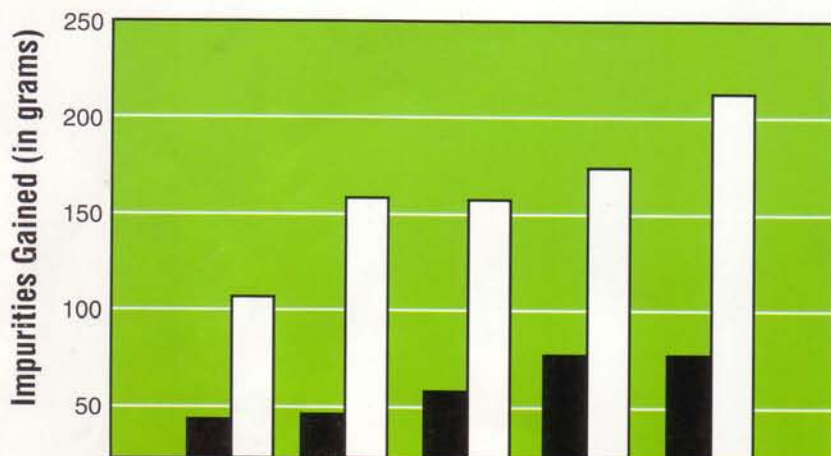

MAGNETICALLY TRAPS FERROUS IMPURITIES

Only the **MAG BAG** has a multi-polarity design to attract microscopic ferrous impurities along the entire length of the 12" or 24" magnetic bars.

And with Elite's multiple-magnet configuration, no other filter bag provides a similarly extensive sphere of influence while still maintaining high production flow rates.

Independent field studies demonstrate ferrous containment gains of **198 percent** over conventional filter bags.

MAG BAG vs. conventional filtration (same filtration time, same flow rate and same media)

Cost-effective reusable magnets with 1" lifting loop for easy removal

The **MAG BAG** comes in a range of sizes and materials for virtually any liquid-based application. It features coated magnets that are rated and finished for your specific application.

- PAINTING ● PLATING ● PARTS WASHERS ● FOOD PROCESSORS
- PRE-CLEANING PROCESS WATER BEFORE SENSITIVE OPERATIONS
- CUTTING, GRINDING AND BORING COOLANTS OR LUBRICANTS
